1 Problem

2 Solution

- Usage of variables
- Parametric form
- Matrix equation
- Verification
- Codes
- Plot

Problem Statement

Show that the point $\begin{pmatrix} x \\ y \end{pmatrix}$ given by $x = \frac{2at}{1+t^2}$ and $y = \frac{a(1-t^2)}{1+t^2}$ lies on a circle for all real values of t such that $-1 \leq t \leq 1$, where a is any given real number.

Usage of variables

S.No	variables used	description
1	t	a variable which takes the real values in the range $(-1, 1)$
2	a	it is a fixed real number
3	$\mathbf{A}(t)$	it is a transformation matrix of parameter t
4	$\mathbf{v}(t)$	it represent the parameter t and allows to define x and y
5	$\mathbf{p}(t)$	a point with coordinates x and y .

Parametric form

Given x and y in the parametric form,

$$x = \frac{2at}{1+t^2}, \quad (3.1)$$

$$y = \frac{a(1-t^2)}{1+t^2} \quad (3.2)$$

Let $\mathbf{p}(t)$ be equal to,

$$\mathbf{p}(t) = \begin{pmatrix} x \\ y \end{pmatrix} = \begin{pmatrix} \frac{2at}{1+t^2} \\ \frac{a(1-t^2)}{1+t^2} \end{pmatrix}. \quad (3.3)$$

Matrix equation

The transformation matrix $\mathbf{A}(\mathbf{t})$ and $\mathbf{v}(\mathbf{t})$ with parameter t are,

$$\Rightarrow \mathbf{A}(t) = \begin{pmatrix} \frac{2a}{1+t^2} & 0 \\ 0 & \frac{a(1-t^2)}{1+t^2} \end{pmatrix}, \quad (3.4)$$

$$\Rightarrow \mathbf{v}(\mathbf{t}) = \begin{pmatrix} t \\ 1 \end{pmatrix}, \quad (3.5)$$

$$\mathbf{p}(\mathbf{t}) = \mathbf{A}(\mathbf{t})\mathbf{v}(\mathbf{t}), \quad (3.6)$$

$$\Rightarrow \mathbf{p}(t) = \begin{pmatrix} \frac{2a}{1+t^2} & 0 \\ 0 & \frac{a(1-t^2)}{1+t^2} \end{pmatrix} \begin{pmatrix} t \\ 1 \end{pmatrix}, \quad (3.7)$$

$$(3.8)$$

Verification

Now, if we check the value of ,

$$\mathbf{p}(t)^\top \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix} \mathbf{p}(t) \quad (3.9)$$

We get,

$$\mathbf{p}(t)^\top \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix} \mathbf{p}(t) = a^2 \quad (3.10)$$

\implies We proved that the given points lie on a circle $x^2 + y^2 = a^2$.
Since we have the values of t in $(-1, 1)$, the y-coordinate of the points is always positive.
We get a semi-circle with those points.

Codes

The codes for verification:

1. The C-code which generates origin and the points by running t values in its domain. Generates points.dat file.

<https://github.com/DESABOINASRISATHWIK/EE1030/blob/main/presentation/codes/code.c>

2. The Python code which reads the points generated by C-code in points.dat file and plots them. Generates plot.png file.

<https://github.com/DESABOINASRISATHWIK/EE1030/blob/main/presentation/codes/plot.py>
